Need for Speed: Blood Culture Rapid Diagnostics & Antimicrobial Stewardship

> Ashley Wilde, PharmD Director, Infectious Diseases Clinical Programs and Research Norton Infectious Diseases Institute

### Objectives

- State the blood culture processing steps followed in a clinical microbiology lab
- Describe the integration of blood culture rapid diagnostics into clinical practice at Norton Healthcare
- Describe the impact of the Norton Healthcare Rapid Bacteremia Response Program

### Microbiology Circa 1884

Hans Christian Gram publishes staining method

Benz Patent Motor Car

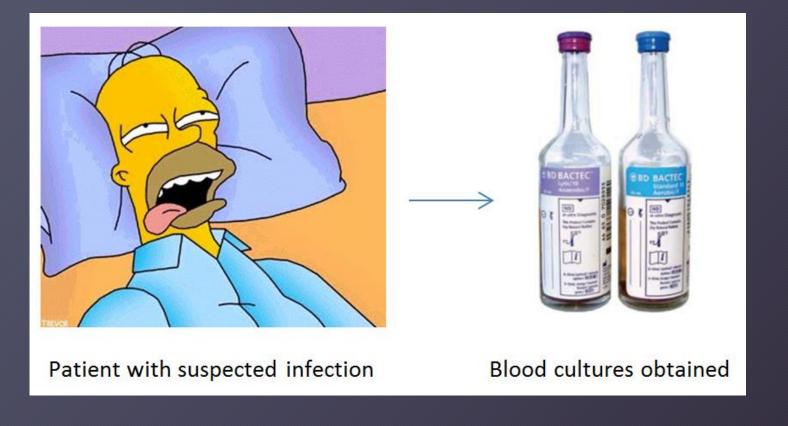

Dailmer AG <u>https://www.daimler.com/company/tradition/company-history/1885-1886.html</u> <u>Accessed 2/28/17</u> Gram, HC. Fortschritte der Medizin. 1884;2:185-9 By Y tambe via Wikimedia Commons from Wikimedia Commons

### **Blood Cultures**

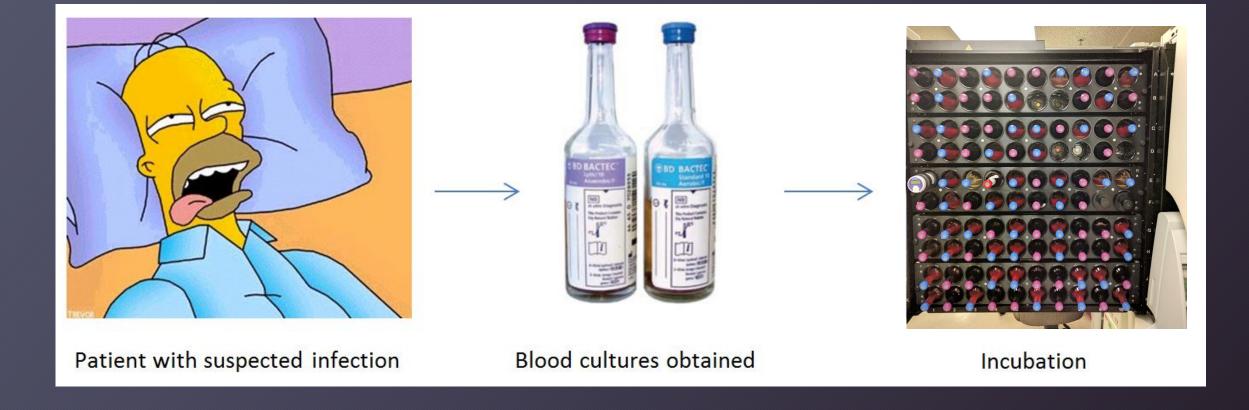

Patient with suspected infection

### **Blood Cultures**

### **Blood Cultures**

### **Blood Culture Incubator**

### Gram Stain

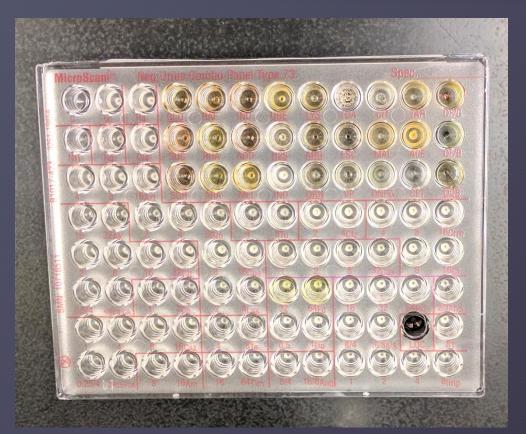

### Plate Reading

### Susceptibility Panels and Purity Plates

## Loading Panels

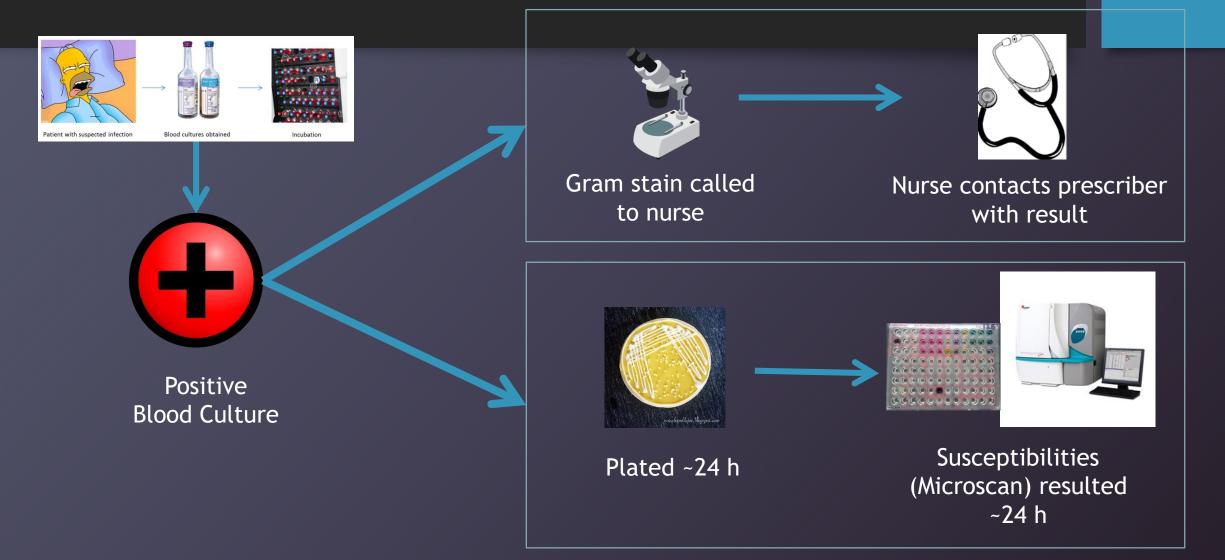

### MicroScan

### Blood Cultures - NHC Pre-2017

### Verigene

- Gold nano-particles to identify small parts of DNA or RNA from positive blood cultures
- ~2-3 hour turn around time

#### Traditional Blood Culture Workflow

BLOOD CULTURE & GRAM STAIN	SAN	IPLES PLATED FOR SUB-CULTURE	RESISTANCE TESTING	CULTURE RESULTS	
HOURS	1 12	1 15	1 36	6	
Verigene Workflow					
BLOOD CULTURE & GRAM STAIN	BC-C RES				
HOURS	12	1	1 36	6	

### Verigene System

Gram Negative Bacteria	Gram Positive Bacteria		
Escherichia coli	Staphylococcus species		
Klebsiella pneumoniae	Staphylococcus aureus		
Klebsiella oxytoca	Staphylococcus epidermidis		
Pseudomonas aeruginosa	Staphylococcus lugdunensis		
Acinetobacter species	Streptococcus species		
Proteus species	Streptococcus pneumoniae		
Citrobacter species	Streptococcus agalactiae		
Enterobacter species	Streptococcus pyogenes		
	Streptococcus anginosus group		
Resistance genes	Enterococcus faecalis		
CTX-M (ESBL)	Enterococcus faecium		
KPC (carbapenemase/CRE)	Listeria species		
NDM (carbapenemase/CRE)			
OXA (carbapenemase/CRE)	Resistance genes		
VIM (carbapenemase/CRE)	mecA (methicillin resistance)		
IMP (carbapenemase/CRE)	vanA/vanB (vancomycin resistance)		

### Benefits of Blood Culture Rapid Diagnostics

### • Early de-escalation

- Contaminant (Coagulase negative staph) vs true infection
- Targeted therapy (MSSA vs MRSA)
- Faster time to appropriate therapy and isolation
  - Pseudomonas
  - Acinetobacter
- Faster time to contact isolation
  - ESBLs
  - Carbapenem-resistant Enterobacteriaceae

### Limitations of Verigene

- Most antibiotic susceptibilities remain unknown
- Does NOT replace full ID and susceptibility
- Some complicated interpretations
  - Ex: Staphylococcus genus, non-aureus, non-epidermidis, non-lugdunensis, mecA positive
- Difficulty with polymicrobial specimens

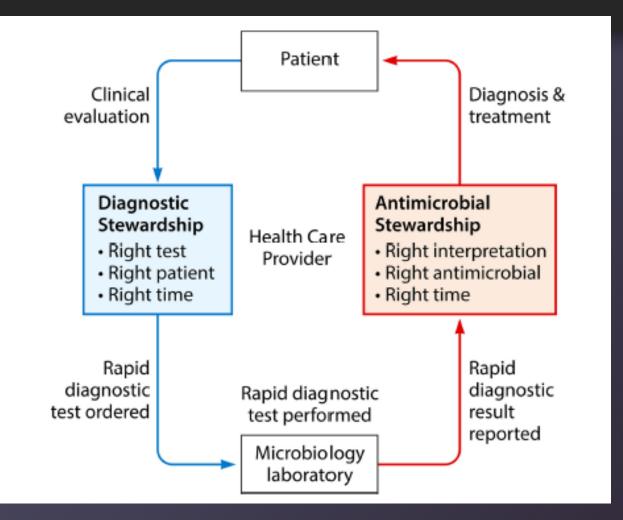

### Knowledge is Power, Right?

- Dr. Raymond Bartlett, clinical pathologist, 1974
- "Our technical capabilities are exceeding our ability to apply them effectively and economically to human problems."
- The microbiology lab today is "faced with a superabundance of academic information and pressure to perform exhaustive, expensive, clinically irrelevant [testing]."

• Odds ratio for mortality risk was reduced if.....

 Number needed to treat to prevent 1 death at 30 days: <u>20</u>

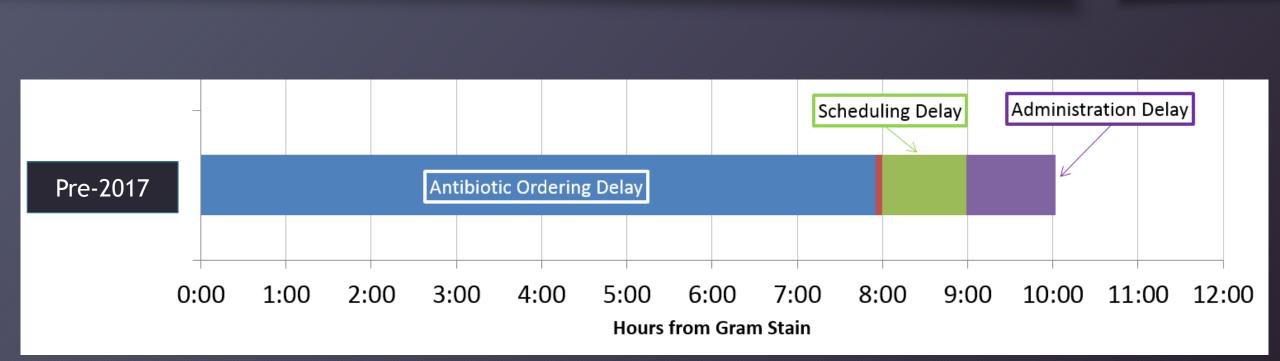

### Implementation of Rapid Diagnostics

- Batched testing versus on-demand testing
- Communication of result
  - How should results be reported?
    - EMR
    - Wording more is not always better
  - Who should receive results?
    - Nurse
    - Provider
    - Infectious diseases specialist
  - How will results be interpreted?
    - Acceptance of medical staff of diagnostic results
    - Acceptance of recommendations

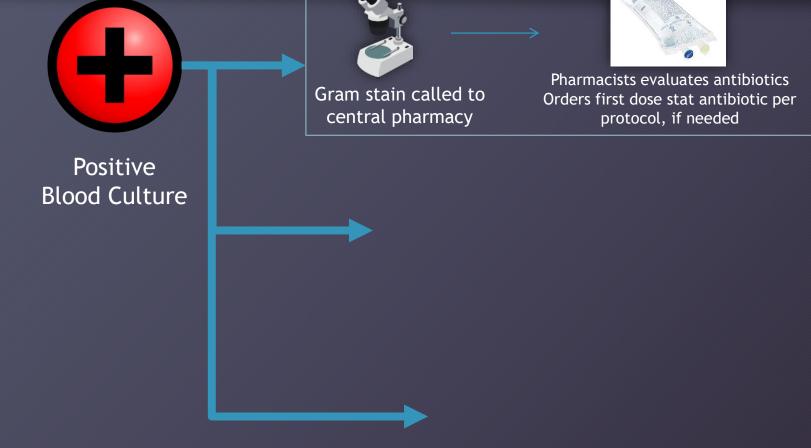

### Integrating ASP with Rapid Diagnostics

- Low resource guideline or protocol
- High resource personalized antimicrobial stewardship decision support
  - Site of infection
  - Antibiotic allergies
  - Prior antibiotic exposure
  - Past culture and susceptibilities
  - Drug-drug interactions
  - Dosing customization

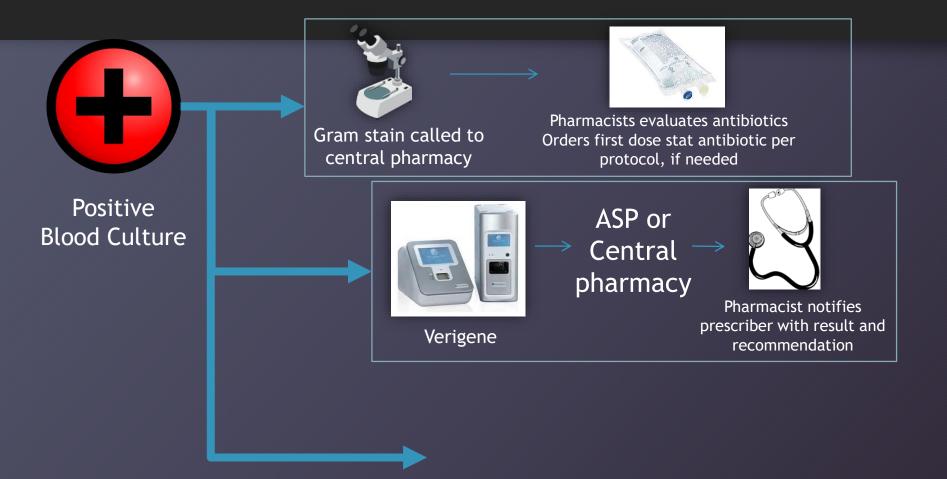

### Time from Gram Stain to Antibiotic: Pre-2017

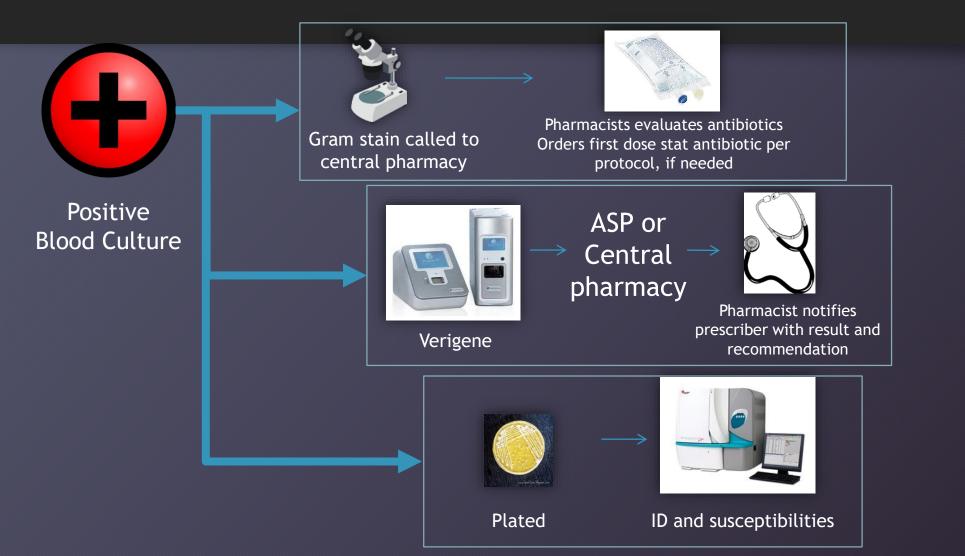

### Rapid Bacteremia Response Program (RBRP)

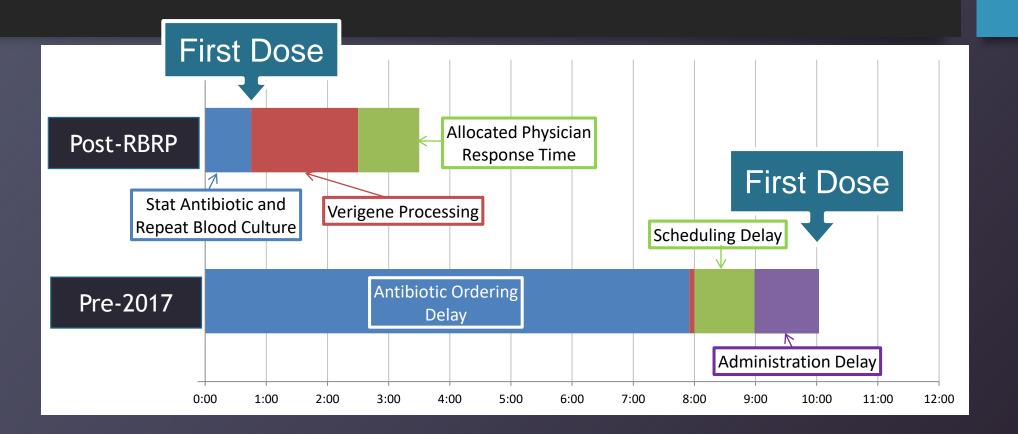

### Rapid Bacteremia Response Program (RBRP)

### Rapid Bacteremia Response Program (RBRP)

### Direct Patient Impact

### Norton Healthcare RBRP - First Year

- 2282 positive blood cultures, 2046 Verigene results
- Stat antibiotic given to 781 patients (34.2%)
- Time from Gram stain to start of antibiotic infusion
  - Baseline historical data: 10-12 hours
  - Median time after RBRP: 51 minutes
  - Fastest time to antibiotic:

### Norton Healthcare RBRP - First Year

- 2282 positive blood cultures, 2046 Verigene results
- Stat antibiotic given to 781 patients (34.2%)
- Time from Gram stain to start of antibiotic infusion
  - Baseline historical data: 10-12 hours
  - Median time after RBRP: 51 minutes
  - Fastest time to antibiotic: <u>7 minutes</u>

### Pharmacist Interventions from Verigene Results

	Verigene Results n=2046		
Adjusted based on RBRP*	1139 (55.7%)		
Escalated spectrum	455 (22.2%)		
Dose optimization	264 (12.9%)		
De-escalated spectrum	429 (21%)		
Contact isolation orders	135 (6.6%)		

\* may have more than one adjustment

- GPC in clusters
  - 92% had repeat blood cultures 2.4 fold increase from baseline

### Is Faster Better?

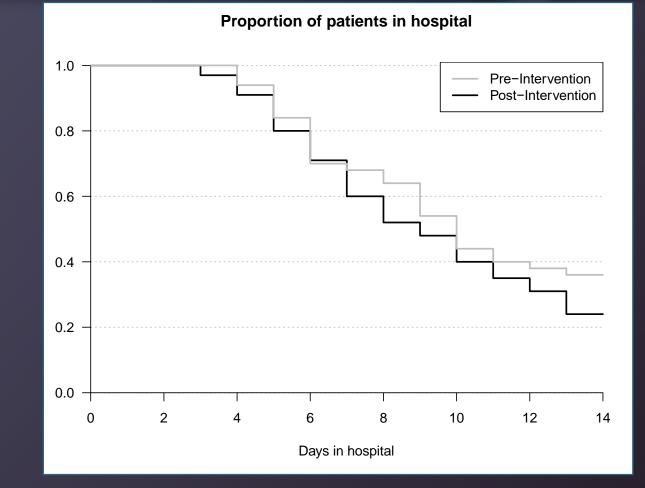

Tesla Model S P100D

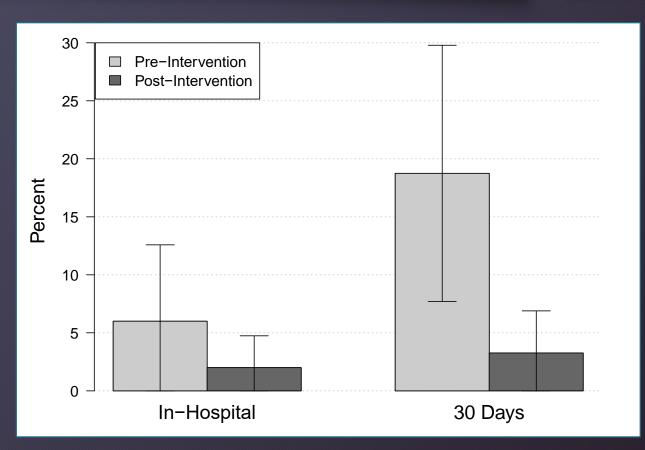

### Community-onset *Staphylococcus aureus* Bacteremia

- 50 pre-RBRP; 100 post-RBRP
- Reduced length of stay (LOS)
- Median LOS
  - Pre-RBRP: 9 (IQR: 6-15) days
  - Post-RBRP: 9 (IQR: 6-13) days
  - Adjusted hazard ratio:
    - 0.49
    - 95% CI: 0.26 0.92; p=0.026

### Community-onset *Staphylococcus aureus* Bacteremia

- 30-day mortality was reduced by 93%
  - Pre-RBRP: 9 (19%)
  - Post-RBRP: 3 (3%)
  - Adjusted odds ratio: 0.072, 95%
    CI: 0.009 0.365, p=0.004
- Number needed to treat to prevent 1 death at 30 days: 7

### 2019 ASHP Best Practice Award

### Conclusions

- Rapid diagnostics have revolutionized the clinical microbiology laboratory
- Selection and implementation of rapid diagnostic tools should be tailored to institutional needs
- Antimicrobial stewardship programs are key to achieving benefits
